

BASTION

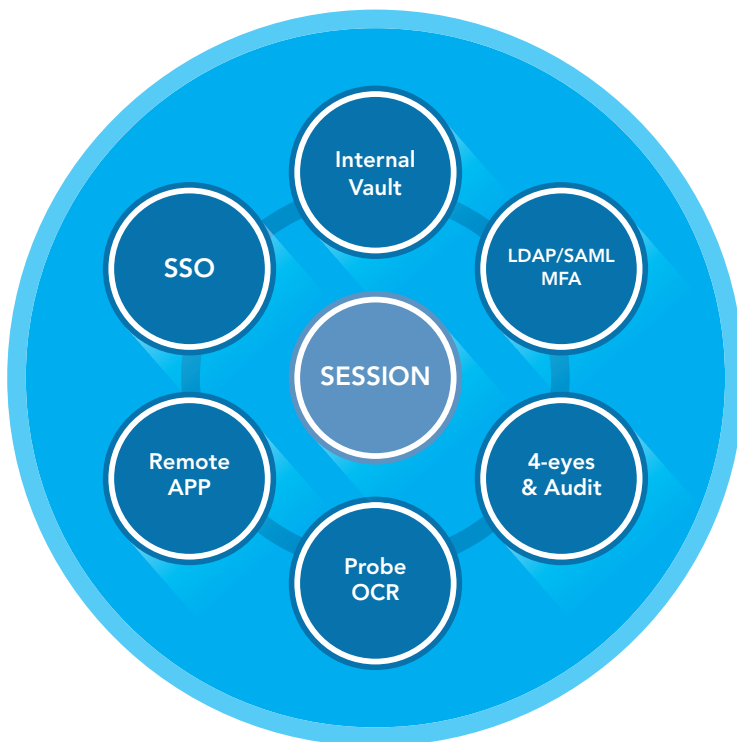

ENTRY LEVEL

Do not jeopardize your company's future because of your privileged accounts!

Regardless of your company activity, IT resources are critical to billing, to administrative tasks and taxes, to comply with regulations, for salaries, in short, for every single vital aspect of your company.

Access to those resources must be strictly restricted, but more often than not is granted to too many people, including external contractors or on-call employees. That equipment can therefore easily be subject to unwanted changes, error, or tampering. WALLIX provides a dedicated solution to micro-enterprises and small businesses, giving them the same full level of control, audit and security as multinational organizations. WALLIX Bastion Entry Level comes with its full security arsenal and is installed totally transparently on your network infrastructure to guarantee proper usage of your privileged accounts.

WALLIX Bastion Entry Level offer

THE CORE BASTION

Establish your defense:

- Integrate the Bastion with your existing security infrastructure (e.g. LDAP/MFA)
- Manage your users and target systems
- Create and enforce password policies for internal and external users
- Set up authorization rules to automatically grant or deny user access

Organize the watch:

- Automatically receive alerts when new privileged sessions begin
- Monitor users in real-time using WALLIX's 4-eyes capabilities
- Record sessions and extract metadata for future review and audit of session activity

Terminate malicious attempts:

- Identify and distinguish between legitimate user sessions and suspicious activity
- Automatically recognize unusual command lines or application use
- Raise alarms or automatic termination of sessions when malicious activity is detected

WALLIX Access Manager: Easily Monitor and Secure All Web Access

- Web access portal to centralizes administration and monitoring of multiple Bastions
- Includes SSO privileged access capabilities
- Includes global search capabilities that allow all recorded sessions and actions to be searched across all Bastions from a centralized location

Reduce dependency on third party access

- Control on-call duties, external third parties, contractors and consultants
- Constrain servers access and verify privileged user identities
- Track and analyze the actions of internal and external users in real-time
- Export logs to SIEMs for Business Intelligence and propose integration/add-ons for best known marketplaces

The rampart ensuring compliance by design

Protecting critical and confidential data is becoming increasingly regulated in the digital world. Collecting data from customers, partners, and employees is under intense scrutiny (GDPR), forcing industries to establish their own regulations to ensure the proper protections of their ecosystems. Many organizations find those government regulations (PCI-DSS, SOX, HIPAA, ISO 27001, etc.) constraining to their business operations, but if they don't comply they can be subject to heavy penalties.

The WALLIX Bastion provides administrators with a powerful set of technologies that monitor privileged user sessions in real-time, make it easy to audit past actions, and identify users connecting to critical assets. With the WALLIX Bastion as part of your security infrastructure, you can improve defenses against malicious intrusions while ensuring you meet all compliance regulations.

The WALLIX Bastion ENTRY LEVEL

- **The privileged accounts protection sized for micro-enterprises and SMBs**
- **Enhanced technologies** to ensure that the right user has access to the right resource and stays within the scope of the authorized intervention
- **Unique in-house agentless technology** (session probe) monitors and records user actions in real-time on target systems and applications without having to install an agent directly onto the system
- **Extended security capabilities** by utilizing advanced integrations with third-party security systems (external vaults, SIEMs)
- **Sized TCO** provides a tailor made solution for SMBs to ensure protection over privileged user sessions
- **Easily meet compliance regulations** by simplifying the data collection process for GDPR, PCI-DSS, SOX, HIPAA, ISO 27001 etc

WALLIX Bastion Entry Level, the easy-to-deploy security solution that ensures control and traceability across critical systems.
