

A simple Identity & Privileged Access Management Solution to mitigate cyber risks

WALLIX and SailPoint offer an integrated solution with a single point of entry to manage and control identities for all users, including both privileged and non-privileged accounts. The combined solution provides end to end security, control and governance over all users - privileged and non-privileged. SailPoint IdentityIQ controls, secures and governs all users, data and applications, ensuring users are accessing the right applications based on their user rights and policies. Identity Governance helps to answer who has access, should they access and what are they doing with that access. The WALLIX Bastion helps users control and protect their critical IT assets: data, servers, terminals and connected objects. Accordingly, systems administrators can create, delete or modify access rights of WALLIX Bastion users, directly from the SailPoint console.

Solution Integration Overview

The integration set-up of the two solutions is done within a few minutes through the standard protocol SCIM 2.0 REST API (System for Cross-Domain Identity Management).

CYBER SIMPLICITY

Interoperability between the WALLIX Bastion and SailPoint IdentityIQ enables organizations to get:

- Fast and seamless integration to deploy and maintain thanks to the light architecture of the WALLIX single appliance.
- Centralized security node providing auditing and reporting capabilities for both access and session management for privileged and non-privileged users.
- Centralized management of both regular and privileged users, with advanced workflow for user on-boarding/off-boarding and access rights management. This centralized management of privileged identity & access data allows administrators to:
 - governs and secures all users - privileged and non-privileged
 - access Bastion privileged accounts to manage target groups and user rights
 - verify member identities as well as granted permissions and access level
 - manage user provisioning/deprovisioning of access data

SECURITY

This joint solution provides enhanced IT risk control:

- Benefit from secured resource access credentials protected in the WALLIX vault being visible in SailPoint IdentityIQ.
- Administrators can proactively identify inappropriate or unauthorized privileged access demands and take appropriate policy remediation actions.

COMPLIANCE

Integrating SailPoint IdentityIQ with the WALLIX Bastion capabilities (secure, trace and audit a company's privileged and non-privileged access) allows organizations to comply with multiple standards and regulations including:

- PCI DSS (Payment Card Processing) to control and limit privileged users and governance for user identity.
- SOX (Sarbanes-Oxley) for session control and enforcement of duty segregation.
- HIPAA (Health Insurance Portability & Accountability) to protect systems.
- GDPR (General Data Protection Regulation), for data protection and privacy.

360° GOVERNANCE

This centralized and unified access governance is based on a bidirectional integration which also allows the WALLIX Bastion to push real-time information into 360° IdentityIQ about users' privileged access demands enabling security alert settings.

Benefits

This joint solution protects a company's most critical data and IT assets in a simple and secure way by:

- Creating a **single point of control** to manage all access to network resources.
- **Centralizing access** for a 360° Governance.
- **Streamlining** the process of **onboarding and offboarding** of users.
- **Identifying** external and internal **threats** through monitoring data.
- Ensuring that **privileged sessions are performed** in accordance with the organization's governance policy.
- **Optimizing the TCO** thanks to fast and easy integration and a lower cost of RUN.

About WALLIX

WALLIX Group is a cybersecurity software vendor dedicated to defending and fostering organizations' success and renown against the cyberthreats they are facing. For over a decade, WALLIX has strived to protect companies, public organizations, as well as service providers' most critical IT and strategic assets against data breaches, making it the European expert in Privileged Access Management.
