

## WALLIX Bastion integration with IBM QRadar Security Intelligence Platform

*Stay ahead of emerging threats with IBM Security and WALLIX*

IBM Security and WALLIX have joined forces on the IBM Security App Exchange to create better network defenses by **detecting, alerting and responding quickly** to cyber-attacks.

### Reduce risk with the WALLIX Bastion

The WALLIX Bastion secures companies' privileged accounts and supports them in their regulatory compliance efforts. It also allows organizations to collect data on privileged user activity and access to vital systems and to send activity logs into Security Information and Event Management (SIEM) platforms for further analysis.

Through advanced contextualization of security events, the IBM Security QRadar DSM for the WALLIX Bastion allows SOC and Security teams to identify, detect, map and analyze privileged user behavior on critical assets to help quickly respond to cyberthreats.

The IBM Security App Exchange provides organizations with:

- Convenient web access to validated extensions to IBM Security solutions
- Additional IBM® Security QRadar® correlation rules, dashboards, visualizations and third-party integrations
- The ability to share content with industry peers to help eliminate threats

WALLIX Bastion and IBM QRadar SIEM integration

**Real-time visualization and user behavior intelligence:** Security teams and SOCs can easily visualize and analyze all activity related not only to WALLIX Bastion users but also to WALLIX Bastion administrators. WALLIX Bastion is handled by IBM Security QRadar just like any other asset covered by the SIEM solution.

**Contextualization and correlation:** Accountability of all privileged account actions is increased with the ability to track connections, generate statistical activity reports and audit logs, and correlate session metadata with contextual information. The joint solution provides IBM Security QRadar with detailed dashboards, context-relevant correlated information, and prioritized alerts that require immediate action in order to stop in real-time cyber-attacks (e.g., simultaneous multi-site connections for one user, an abnormal number of connections, abnormal changes in Bastion configuration, etc.).

## Discover the IBM Security App Exchange

The IBM Security App Exchange is the premier collaboration site for sharing software enhancements, applications and extensions that complement IBM Security solutions. It enables security teams to access tools that improve visibility into threats, anomalies and malicious activity occurring on the network, while also expanding the mitigation and remediation capabilities deeply integrated in the IBM QRadar Security Intelligence Platform.
