

WALLIX Consulting

Secure your digital transformation

Develop your identity
and access security
strategy to succeed
in your digital
transformation!

A strategic challenge

Beyond being a purely technological matter, to succeed in your security digital transformation plan is a strategic challenge for the company.

That is why **WALLIX Consulting** walks you through a custom-made planning of your global project of IT infrastructures and critical data access security, in connection with your strategic objectives.

Experts of WALLIX solutions, our consultants help you to develop a long-term plan to build and optimize your identity and access security projects by using their wide experience in international projects and their deep knowledge in European cybersecurity regulations.

From the strategic definition to the operational deployment, WALLIX Consulting walks you through each step of your project.

#1

THE DISCOVERY

FORMALIZE your organization strategic needs and objectives

The key advantages

- Validate that your action plan and your cybersecurity strategy are in line with each other
- Formalize your identity and access security objectives and define the relevant indicators
- Understand and manage the risks of your project

Your IT system, and more specifically the scope concerned (internal teams, third parties, suppliers...), provides a collection of information through interviews and document analysis. From these elements, we identify **the needs** of your organization in order to optimize your identity and access security policy and we define **the objectives** to achieve them.

In addition, we set with you the **success criteria** and the key performance indicators to be used in your projects while considering the obligations of compliance.

THE MATURITY ANALYSIS

ASSESS your level of maturity in the management of access and identities

#2

Our experts rely on a proven methodology to **assess your current maturity level** regarding your identity and access security. They analyze the gap versus the optimum

level that you wish to achieve depending on your objectives. WALLIX consultants use specific metrics combining those of Gartner and the ones set during the formalization stage of needs and objectives. The analysis covers access and authentication management, users and privileged access management (PAM), and endpoint privilege management (EPM). We also assess your level of cybersecurity compliance (SCF, ISO 27001, NIST...).

This assessment is followed by a **gap analysis** that measures the current state of your identity and access security and the way to go to achieve the optimum level desired.

The key advantages

- Define the long-term vision of your identity and access security policy
- Share this vision with both internal and external interested parties
- Measure your organization non-stop improvement in this area

#3

DEVELOP your action plan to strengthen your access and identity security

The key advantages

- Plan the rise in maturity in iterative mode
- Define the first iterations of the plan

THE ACTION PLAN

Our experts help you develop your **iterative action plan** to achieve your identity and access security goals.

A specific study is carried out in each iteration and this results in the delivery of an architecture plan, an implementation and/or migration plan, and an operation plan.

THE CHANGE MANAGEMENT

#4

All throughout the development and implementation of the digital transformation project, our consultants walk you through the change management and work closely with the people involved.

Since a successful project requires good communication and a clear understanding of the project, WALLIX Consulting helps you to define the key messages to be delivered both internally and externally and to organize training sessions for your teams.

The impact of the change and the level of support is measured through a user survey and the implementation of indicators (user feedback, performance monitoring, circumvention strategies detection, etc.).

ENSURE your
teams' support

The key advantages

- Provide a good understanding of the project
- Facilitate your teams' support

A software company providing cybersecurity solutions, WALLIX is the European specialist in Identity and Access Security Solutions. WALLIX's unified solutions portfolio enables companies to respond to today's data protection challenges. WALLIX solutions guarantee detection of and resilience to cyberattacks, which enables business continuity. The solutions also ensure compliance with regulatory requirements regarding access to IT infrastructures and critical data. The portfolio of unified solutions is distributed through a network of more than 180 resellers and integrators worldwide. Listed on the Euronext (ALLIX), WALLIX supports more than 1,200 organizations in securing their digital transformation.
